

Removal of Skills/Curricular Deficiencies

Incoming students who have skills deficiencies (18 or lower in English, Math, Reading, or Science) must remove these deficiencies **in the first 24 hours** they attempt at ECU. This may be accomplished in any of the following ways:

- Take the placement test and make the cut score or higher for each area in which a deficiency exists. If the cut score is not achieved on the first test, the student may retake the placement test in 30 days following the initial test at a cost of \$15. Sample questions and information about the test may be found online at <http://accuplacer.collegeboard.org/students> (Next Generation writing; reading comprehension; and/or quantitative reasoning, algebra, and statistics). **Please note:** You cannot take the placement test to remove a skills deficiency once you have begun a zero level course.
- Take the ACT National after sixty (60) days following the last ACT National taken
- Take the ACT Residual offered at ECU and accepted only for ECU students. (May be taken only once in a calendar year)
- Take and pass the required zero-level course(s) for any area in which a deficiency exists
- Take and pass the co-requisite courses for English 1113 and Math 1513 or departmental exams in English and Science (not applicable to Curricular Deficiencies)

Students must successfully remediate basic skills/curricular course requirements (zero-level courses) within the **first 24 hours attempted** or have all subsequent enrollments restricted to zero-level courses until the deficiencies are removed.

I understand that I have one or more deficiencies that must be remediated. I have read and understand the ways in which these deficiencies must be remediated and the time within which this must be done.

By checking this box I confirm that I have read, understand, and agree to the requirements above.
